

BLOK Spreaders are lightweight tandem lift adaptors for standard single or twin lift STS spreaders. BLOK Spreaders can lift 2 columns of containers in one lift, as HTLs (horizontal tandem lifts) or BLOKs of two VTL units. They operate autonomously from the main spreader, controlled wirelessly by the crane driver.

BLOK Spreaders, when used with **BLOK Trailers** and **BLOK Rigs**, can speed ship to shore cycle times for empty containers up to 4 times faster.

- Fit or remove the **BLOK Spreader** in seconds
- Compatible with single and twin lift spreaders
- Electro-hydraulic, battery powered
- Highly accurate computerised wireless control system
- Compatible with 40ft, 45ft, 53ft containers
- Cell guide compatible to pick up 40' containers below deck in HTL
- Hatch cover compatible
- 20t SWL
- Load configurations:
 - Two empty containers in HTL
 - Four empty containers in VTL
 - Two SOLAS controlled lightly laden containers balanced within 20%, in HTL
- Skew and offset height adjustment
- Tandem separating distance infinitely adjustable, up to max 1600mm (straddle carrier compatible)
